## PROFESSIONAL SUMMARY

Detail-oriented Computer Science student (Class of 2027) with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming (OOP). Proficient in designing and developing web applications and APIs using Python, JavaScript, and Java, with hands-on familiarity in Flask, Django, FastAPI, and Next.js. Experienced in database management across SQL and NoSQL (MongoDB, Firebase Firestore, Supabase), with a basic understanding of GraphQL API integrations and version control (Git). Proven open-source contributor (TensorFlow Lite C API) and collaborative Agile team member with excellent communication skills, dedicated to writing clean, well-documented code.

## EDUCATION

### GLA University

2023 – 2027

Bachelor of Technology in Computer Science and Engineering

Mathura, India

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming (Java/C++), Operating Systems (Unix/Linux), Computer Networks, Database Management Systems (DBMS), Software Engineering.
- **Key Achievements:** MongoDB Certified Associate Developer, GirlScript Summer of Code Ambassador, Hackathon Winner.

## TECHNICAL SKILLS

**Programming Languages :** Python, JavaScript, Java, C++, SQL, Bash/Unix Shell Scripting, PHP, Go (Basics)

**Frameworks & Web Tech :** Flask, Django (basics), FastAPI, Next.js, GraphQL (understanding), HTML5/CSS3, REST APIs

**Databases :** SQL (PostgreSQL/MySQL), NoSQL (MongoDB, Firebase Firestore, Supabase)

**Software Engineering :** Data Structures, Algorithms, Object-Oriented Programming (OOP), Git/GitHub (Version Control)

**Cloud & DevOps :** Docker, AWS Services, CI/CD Pipelines, Cloud-Native Development, Unix/Linux Systems

**Methodologies & Soft Skills :** Agile/Scrum, Code Reviews, Excellent Written & Verbal Communication, Problem Solving

## EXPERIENCE & TRAINING

### TensorFlow (Google Open Source)

Oct. 2024 – Present

Open Source Core Contributor (CI/CD Build Debugging & TFLite)

Remote

- Diagnosed and patched memory safety errors in `tf.raw_ops.ResourceSparseApplyAdagradV2` to optimize C++ API runtime stability, logging structures, and TensorFlow Lite runtime integrations.
- Analyzed and debugged compiler and CI/CD build logs to automate dependency validation checks, preventing integration bottlenecks in Windows/Unix operating system environments.
- Participated in peer code reviews and collaborated with core maintainers under Agile workflows, managing contributions and documenting API changes via centralized git repositories.

### GLA University / KVCH

June 2024 – July 2024

Software Development & Systems Trainee

Mathura, India

- Configured and maintained local development servers and virtualized environments (VMware/VirtualBox) running Linux (Ubuntu/Debian) to host enterprise-grade Java full-stack applications.
- Wrote robust, object-oriented code in Java to build core features for student applications, integrating with SQL databases for dynamic data persistence.
- Containerized application stacks using Docker and automated deployment and database backup tasks using Unix shell scripting to enforce configuration consistency.

### India Space Academy (Collaborated with ISRO & NASA)

July 2025 – Aug. 2025

Data Systems and Server Support Intern

Remote / Delhi, India

- Developed Python data processing and server health monitoring scripts to automate checks on SQL/NoSQL database performance metrics and prevent bottlenecks.
- Collaborated with database administrators to design storage schemas and validate data transmission logs.
- Wrote comprehensive technical documentation and script validations to check API and server availability, ensuring high reliability.

PROJECTS

- OffShift – Parametric FinTech & Insurance Platform** | *Next.js 14, TypeScript, Supabase, Cloud Routing, Git*Mar. – Apr. 2026
- Engineered a serverless, parametric insurance application using Next.js and Supabase (PostgreSQL) to automate instant payouts for gig workers based on food delivery app outages (Downdetector API).
  - Integrated real-time external APIs (Razorpay, Downdetector) with Upstash Redis caching, creating robust exception-handling and JSON payload validation layers. **Code:** [github.com/SHIVIKA330/OffShift](https://github.com/SHIVIKA330/OffShift)
- Quint Beauty – Serverless E-Commerce Platform** | *Firebase Firestore, JavaScript, HTML/CSS, PHP, Git* May 2026
- Developed a database-driven e-commerce platform integrated with a NoSQL **Firebase Firestore** database, loading product listings, active promotional offers, and variant shades dynamically.
  - Scripted a modular client-side shopping cart with localStorage persistence and built a contact form pathway backed by a custom PHP mailer. **Live:** [quintbeauty.com](https://quintbeauty.com)
- ET-Concierge (Artha) – Secure AI Assistant & Analytics Platform** | *FastAPI, Cloud Deployments, System Diagnostics*Apr. 2026
- Developed a secure **FastAPI (Python)** backend integrated with LLM endpoints (NVIDIA Llama 3.1 70B) for emotion-aware and context-sensitive interactions.
  - Designed REST API endpoints with robust error handling and logging structures, and wrote system validation scripts to check operational status. **Live:** [et-concierge.onrender.com](https://et-concierge.onrender.com)

CERTIFICATIONS

|                                                          |            |
|----------------------------------------------------------|------------|
| MongoDB Associate Developer – MongoDB University         | Dec. 2024  |
| Trust and Security with Google Cloud – Simplilearn       | April 2026 |
| Full Stack Development (JAVA) – KVCH                     | June 2024  |
| AWS Educate Generative AI / Machine Learning Foundations | Feb. 2026  |
